

Two Books · Disjoint Letters — Worked Example: signal vs folklore

Two claims walked end to end with live Book6 numbers, permutation nulls, and FDR. The skill: keep a validated geometric signal and reject a famous cipher claim, using the same discipline for both.

Step 1 — State both claims

- Claim A (geometry): the 29 muqatta'āt sūras cluster contiguously in the order.
- Claim B (folklore): Sūrat Qāf (50) is saturated with the letter qāf.

Step 2 — Test Claim A: contiguity

test	p (vs permutation null)	verdict
contiguity, muṣḥaf order	0.0005	significant
contiguity, nuzūl order	0.0005	significant

- Re-tag 29 random sūras thousands of times; the real tag clusters far more than chance — and it holds in TWO independent orderings.
- Corroborating geometry: marked sūras median ≈ 85 āyahs vs ≈ 26 for the rest (longer); letter-entropy differs at $p \approx 0.002$; root-entropy and richness at $p \approx 0.0005$.
- Verdict A: SURVIVES — a real positional/organizational signal.

Step 3 — Test Claim B: the Qāf myth

quantity	value (Book6)
qāf density in sūra 50	3.76%
its rank among 114 sūras	111th
p (vs permutation null)	≈ 0.10

- The density is unremarkable — sūra 50 ranks 111th, not 1st — and the elevation is not significant ($p \approx 0.10$).
- Verdict B: FAILS — an attractive story the data does not support.

Step 4 — Apply FDR to the whole battery

Read together, not in isolation: the thematic-coding claim comes in at $p = 0.049$ — borderline, and it does NOT survive Benjamini–Hochberg correction; the embedding-similarity claim is $p \approx 0.10$. Six geometric/compositional tests survive; three cipher claims fail.

Step 5 — Report: one fact + one labelled reading

Fact: muqatta'āt sūras are significantly contiguous ($p \approx 0.0005$, two orderings), longer (median 85 vs 26), and compositionally distinct (letter- and root-entropy ≤ 0.002); the Qāf-letter claim is n.s. ($p \approx 0.10$).

Interpretation (labelled): I read the disjoint letters as a validated positional/organizational pointer to a distinct block of sūras — not a letter cipher.
